

Philippine Army
Officer Candidate School
ACADEMIC SYSTEM

— SYSTEM PROPOSAL

Academic Monitoring System

One secure platform for candidate records, grades, digital quizzes and examinations, and academic monitoring — running on the school's own network.

Purpose of this proposal

To present the Academic Monitoring System to the school's leadership: what it is, what it does, who uses it, how it fits the school's daily work, and how it can be introduced step by step.

At a Glance

4

User roles

Administrators, instructors and candidates each see only what they need.

4

Academic standings

Passing, At Risk, Failing and Incomplete, computed automatically.

3

Question types

Multiple choice, true or false, and essay, with images, audio and video.

8

Ready-made reports

Standing, class and subject performance, at-risk and failing lists, results and grade distribution.

No internet needed

Runs on the school's own server and network.

Full audit history

Important changes record who made them, when and why.

About this document. This proposal describes the Academic Monitoring System as it has been built. Every feature listed here is already working in the system and can be shown in a live demonstration.

SECTION ONE

1 Executive Summary

The **Academic Monitoring System** is a web-based platform built for the Philippine Army Officer Candidate School. It brings candidate records, grading, quizzes and examinations, academic monitoring, military fitness records and candidate expenses together in one place.

Staff use the system from an ordinary computer. Candidates take quizzes and examinations on school-issued tablets. Everything runs on the school's own server and internal network, so the system **does not depend on internet access** and the school's records stay on the school's own equipment.

Its purpose is simple: help instructors and administrators **record results accurately, see early which candidates need help**, and **run examinations reliably**, with less paperwork and no manual grade computation.

Accurate, automatic grades

Grades are computed by the system from the school's own grading weights. No hand computation and no separate spreadsheets.

Early warning

Candidates who are at risk or failing are flagged as soon as scores are recorded, not at the end of the period.

Reliable digital examinations

Tablet examinations with a timer, automatic saving and protection against brief Wi-Fi interruptions. Objective items are scored instantly.

Accountability

Each user sees only what their role allows, and important changes, such as grade corrections, record who, when and why.

What the school receives

- Central records for candidates, classes, subjects and instructors
- Configurable grading with automatic academic standing
- Dashboards and reports built from live records
- A reusable question bank for quizzes and examinations
- Tablet-based examinations with live instructor monitoring
- A personal portal for each candidate
- Military fitness testing records and scoring
- Expense assignment to classes or individual candidates

SECTION TWO

2 The Challenge

Training schools that manage candidate records on paper and in separate spreadsheets commonly face the challenges below. Each one grows as the number of candidates, subjects and examinations increases. The system was designed to address all of them.

Paper-based quizzes and examinations

Printing, distributing, collecting and checking papers by hand takes many hours, and papers can be misplaced.

Manual grade computation

Weighted grades computed by hand or in separate files are slow to prepare, and errors are easy to make and hard to find.

Problems noticed too late

A candidate who is falling behind may only be noticed when final grades are prepared, when there is little time left to help.

Scattered records

Grades, examination results, fitness results and expenses are often kept in different files, offices and formats.

Slow reporting

Summaries of class and subject performance must be compiled by hand each time management asks for them.

Limited traceability

When a grade is changed, it can be hard to know who changed it, when, and for what reason.

The answer: one trusted source of information

The Academic Monitoring System replaces scattered paper and spreadsheet work with **one secure system**. Results are recorded once, grades are computed automatically, problems are visible immediately, and every important change is recorded.

SECTION THREE

3 The Proposed System

The system is organized into modules that share the same records. A score entered by an instructor immediately updates the candidate's grade, standing, dashboards and reports.

How it runs at the school

The system is installed on a server at the school. Computers and tablets connect to it through the school's own Wi-Fi or local network, the same way they would open a web page.

No public internet required. The system does not rely on outside services, cloud storage or online resources to work, and the school's records do not leave the school's network.

SECTION FOUR

4 Who Uses the System

Every user signs in with their own account. What they can see and do depends on their role and, for instructors, on the classes and subjects assigned to them.

Super Administrator

Overall system management

- Manages user accounts, roles and permissions
- Has access to every module and record
- Reviews the full audit history
- Charges candidates for expenses, such as uniforms or meals

Academic Administrator

Academic office

- Manages candidates, classes, subjects and academic periods
- Assigns instructors to classes and subjects
- Sets grading rules and passing and warning grades
- Views monitoring, reports, fitness and audit history

Instructor

Only for assigned classes and subjects

- Records and finalizes grades for assigned subjects
- Builds questions, quizzes and examinations
- Monitors examinations live and grades essays
- Sees alerts and reports for their own candidates

Candidate

Signs in with their candidate number, on a school tablet

- Takes available quizzes and examinations
- Sees their own grades, standing and released results
- Views their own information, subjects and instructors
- Downloads their own registration and academic record

SECTION FIVE

5 Features and Modules

MODULE 5.1

Candidate and Academic Records

All candidate information is kept in one place and linked to the school's academic structure: academic periods, classes or batches, subjects and instructor assignments.

- Candidate number, name, class, training group and status
- Candidate photo, stored privately on the school server
- Enrollment statuses: enrolled, on leave, withdrawn, completed
- Academic periods, classes, subjects and instructor assignments
- Period overview showing every class, subject and instructor
- Printable **Certificate of Registration** and **Academic Record** PDFs

MODULE 5.2

Grades and Academic Standing

Each subject has its own grading categories and weights, set by the academic office. For example, Quizzes 20%, Examinations 30%, Practical 30% and Other Requirements 20%. Instructors record scores, and the system computes every grade.

- Assessments with raw scores, finalized when complete
- Passing and warning grades set for each academic period
- Corrections to finalized scores require a reason and are kept in history
- Missing scores are shown as missing, never silently counted as zero
- Academic standing is computed automatically:

Passing

At Risk

Failing

Incomplete

MODULE 5.3

Academic Monitoring and Early Warning

Dashboards show the academic status of the school at a glance and point directly to the candidates who need attention.

- Administrator dashboard: totals by standing, standing distribution, subject performance and grade distribution charts
- Instructor dashboard: assigned subjects, upcoming assessments and academic alerts by subject
- Lists of at-risk and failing candidates with filters
- Candidate academic profile: grades by subject, recent assessments and overall standing

MODULE 5.4

Question Bank

Instructors build a library of reusable questions for each subject, organized by topic. Questions can be used again in later quizzes and examinations.

Multiple Choice

True or False

Essay

- Points, topic and an optional explanation for each question
- Images, audio and video can be added to a question
- Images can also be used inside answer choices
- Import many questions at once from a prepared CSV file
- Duplicate a question to make a variation quickly
- Questions are deactivated rather than deleted, so past examinations keep their history

MODULE 5.5

Quiz and Examination Builder

Instructors create a quiz or examination in three guided steps: settings, questions, then review and publish. They can only publish to the classes they are assigned to.

Schedule and limits

- Opening and closing date and time
- Time limit and number of attempts allowed
- Passing score

Fairness and integrity

- Shuffle the order of questions and answer choices
- Give each candidate a random set of questions from a larger pool
- Optional access code to start

Navigation

- One question at a time or all questions on one page
- Allow or prevent going back to earlier questions

Results

- Automatic submission when time runs out
- Instructor decides when candidates may see results

MODULE 5.6

Tablet Examination Experience

Candidates take quizzes and examinations on tablets through a simple, distraction-free screen designed for touch. The candidate portal can be installed on the tablet's home screen and opens full screen like an app.

- Large answer buttons, clear progress and a visible timer
- Question list showing answered, unanswered and flagged questions
- Answers are **saved automatically** as the candidate works
- If Wi-Fi drops briefly, answers are kept on the tablet and sent when the connection returns
- Clear save status: saved, saving, or stored on the device
- Submission confirmation and a receipt; a second submission is not possible

MODULE 5.7

Live Examination Monitoring

While an examination is running, the instructor's screen refreshes on its own and shows the progress of the whole class. Candidates' answers are never shown on this screen.

Active

answering now

Submitted

finished

Not started

yet to begin

Inactive

no recent contact

- **Leaving the examination screen is recorded.** If a candidate switches to another app or window, the instructor sees how many times and for how long. It is an indicator for the instructor; it does not use the camera or microphone and does not penalize anyone automatically.

MODULE 5.8

Scoring, Essay Grading and Results

Multiple-choice and true-or-false items are scored instantly when a candidate submits. Essays go to a grading queue for the instructor.

- Essay grading queue with points and feedback
- Results are shown to candidates only after the instructor releases them
- Grading changes are kept in a history
- **Post to gradebook:** examination scores can be sent into the subject's grades in one step, choosing the highest or latest attempt
- **Item analysis:** shows how many candidates got each question right and which answers they chose, helping instructors spot questions that were too hard, too easy or unclear

MODULE 5.9

Reports and Dashboards

Reports are built directly from the system's records, so they are always current. Each report can be filtered by academic period, class, subject or candidate, shown with charts, and printed or saved as a PDF.

Candidate standing

Class performance

Subject performance

At-risk candidates

Failing candidates

Examination results

Quiz results

Grade distribution

From score to report, without re-typing

A result is entered once. Everything that depends on it is updated by the system.

**Score recorded**

By the instructor, or scored from an examination

**Grade computed**

Using the subject's own weights

**Standing updated**

Passing, At Risk, Failing or Incomplete

**Dashboards and reports**

Show the new status at once

MODULE 5.10

Military Fitness Testing

The school defines its own fitness events and standards, records test results for each class, and the system scores them. Fitness results are kept as a **separate record** and do not change academic grades.

- Events measured in repetitions or time, each with a passing and a maximum standard
- Standards are copied into each test, so later changes never alter past results
- Results show passed, failed or incomplete, with charts by event
- Each candidate's profile shows their latest fitness results

MODULE 5.11

Expenses

The administrator defines an expense once, for example a uniform set or a month of meals, with its category, amount and due date, then assigns it to a whole class or to chosen candidates in one action.

- Assign to a whole class or pick candidates by class or by search
- A candidate can never be charged the same expense twice
- A mistaken charge is voided with a reason, never erased
- Lists of charged candidates and totals for each expense

The system records amounts only. It does not process payments or connect to banks.

MODULE 5.12

Candidate Portal

Each candidate has a simple personal portal that shows only their own information.

- **My Home:** open and upcoming examinations, academic standing and recent released results
- Assessments that still have no recorded score
- **My Information:** details, subjects, instructors, grades and history
- Download their own Certificate of Registration and Academic Record

MODULE 5.13

Audit History

Important actions are recorded automatically, including sign-ins, account and role changes, candidate record changes, grade entries and corrections, examination publishing and result release. Administrators can search this history by person, action and date.

Clear limits, by design

To keep the system focused, safe and easy to run, it intentionally does **not**:

- process payments or connect to banks
- use cameras, microphones or screen recording
- depend on the internet or outside cloud services
- show candidates any other candidate's records

SECTION SIX

6 How Everyday Work Changes

The most common tasks follow short, clear steps. Below are the main workflows as they work in the system today.

Instructor: recording grades

Candidate: taking an examination

Instructor: running an examination

Administrator: reviewing academic status

Administrator: charging an expense

SECTION SEVEN

7 Benefits to the School

The table compares common manual practices with how the same work is done in the system.

AREA	TYPICAL MANUAL PROCESS	WITH THE ACADEMIC MONITORING SYSTEM
Examinations	Printed papers, collected and checked by hand	Taken on tablets; objective items scored instantly
Grade computation	Weighted grades computed by hand or in spreadsheets	Computed automatically from the school's own weights
Struggling candidates	Often noticed only when final grades are prepared	Flagged as At Risk or Failing as soon as scores are recorded
Records	Spread across files, offices and formats	One central, linked record for each candidate
Reports	Compiled by hand for each request	Eight ready-made reports, filtered and printed in minutes
Grade changes	Hard to trace who changed what	Every correction records the person, time and reason
Examination integrity	Same paper for everyone; limited oversight	Shuffled questions, random question sets, live monitoring
Candidate access	Candidates ask the office for grades and records	Candidates see their own released results and records

Saves staff time

Less checking, computing and compiling by hand.

Improves accuracy

One set of rules applied the same way for everyone.

Helps candidates sooner

Early warning gives time to act.

Clear visibility

Current status for management at any time.

Protects records

Role-based access and a complete audit history.

Less paper

Fewer printed examinations and forms.

In short

Instructors spend less time on paperwork and more time teaching. Administrators see the academic status of every class **as it happens**. Candidates get fair, reliable examinations and clear access to their own results.

SECTION EIGHT

8 Security, Privacy and Setup

Academic records and examinations are sensitive. The system was built with protection in mind from the start.

Controlled access

Personal accounts with securely stored passwords. Access is granted by role and permission; instructors see only their assigned classes. Staff accounts created or reset by an administrator must set a new password at the next sign-in.

Protected examinations

Answer keys are never sent to candidate tablets. Time limits and attempt limits are enforced by the server, not only by the tablet. Results stay hidden until released.

Safeguards against misuse

Repeated failed sign-ins and repeated access-code guesses are slowed down. Inactive accounts cannot sign in. Candidates can never open another candidate's records.

Traceable changes

Important actions are recorded in the audit history. Finalized grades are never silently overwritten: corrections keep the old value, new value, person and reason.

What the school needs to run the system

A school server

One computer at the school to host the system and its database, ideally with a regular backup routine.

The school network

The school's existing Wi-Fi or local network, reaching classrooms and examination rooms.

Devices

Staff computers and candidate tablets with a modern web browser. No other software is required.

Records stay on the school's own server. Regular database backups, and occasional test restores, are recommended as part of normal operations.
